

Mission

Together for Sustainable Social Development

As a non-profit foundation, Siemens Stiftung is committed to sustainable social development. We focus on three topic areas: Access to Essential Services, Connected Societies, and Climate & Sustainability. Adopting a proactive approach, we shape the transformations required to tackle these challenges. By working with partners from the fields of Education, Social Entrepreneurship, and Arts & Culture, we strengthen collective learning and locally based, sustainable structures. Our projects and networks focus on Africa, Europe, and Latin America.

Topic Areas

Access to Essential Services

Having access to essential services is fundamental to life and is crucial for any form of development. Our efforts therefore focus on supporting individuals and organizations that strive to enhance existing supply systems. Our priority areas are in line with the UN Sustainable Development Goals (SDGs), including sustainable energy, e-mobility along with water & hygiene. We collaborate with social enterprises, public institutions, and key players in education and civil society to create benefit for communities in underserved regions. Together with our partners, our shared vision is to strengthen these communities and enable sustainable development.

Connected Societies

We create spaces for mutual learning and knowledge transfer with the goal of enabling participation and equal opportunities. We facilitate interdisciplinary connections across borders, drawing on ideas and substantial approaches from our focus areas of Social Entrepreneurship, Education, and Arts & Culture. Through our national and international networks and projects, we promote innovative and inclusive learning, while cultivating a culture of digitality that combines the strengths of both the digital and analog worlds in meaningful ways.

Climate & Sustainability

Protecting and preserving the planet for future generations requires cross-sectoral collaborations and a shift toward holistic, sustainable practices that combine social, ecological, and economic objectives. We strive to drive this necessary process of transformation through climate change education, cultural initiatives, and social entrepreneurship. Together with our partners, we want to step forward by not only reducing negative impacts on ecosystems but also strengthening regenerative practices and resilience.
